

C# Example

```
using System.Net;

public class MyWebRequest
{
    public MyWebRequest(string url, string data)
    {
        using (WebClient client = new WebClient())
        {
            client.Headers[HttpRequestHeader.ContentType] =
                "application/x-www-form-urlencoded";
            client.UploadStringAsync(new Uri(url), data);
        }
    }
}

public void PostData(String title, String message)
{
    String postData = String.Format(
        "ApiKey=yourApiKey&PushTitle={0}&PushText={1}",
        title, message);

    MyWebRequest myRequest = new MyWebRequest(
        "HTTPS://www.notifymydevice.com/push",
        postData);
}
```
