

Python Example

```
#!/usr/bin/env python
# -*- coding: utf-8 -*-

import requests
import json

api_key = 'user_api_key'
notification_title = 'Some title to send'
notification_message = 'Some message to send'
url = "https://www.notifymydevice.com/push"
data = {"ApiKey": api_key, "PushTitle": notification_title, "PushText": notification_message}
headers = {'Content-Type': 'application/json'}
r = requests.post(url, data=json.dumps(data), headers=headers)
if r.status_code == 200:
    print 'Notification sent!'
else:
    print 'Error while sending notificaton!'
```

coding UTF-8 is for users that want to send latin character like ŠĎČĆŽšďčž
